PROFESSIONAL SUMMARY

Senior Software Engineer who solves hard problems and delivers — secure, compliant, built to last. Seven years designing and shipping SaaS platforms for healthcare, identity and access management, and multi-tenant products, from architecture and system design to production. Security and compliance are built in from day one: customer data isolated, PHI and PII protected, regulation treated as a requirement. Uses AI-assisted engineering to deliver faster and leaner without lowering the bar.

1 · Solve the real problem
Find the problem that matters and ship a working, verified solution — not just code.

2 · Security first
Customer data isolated, PHI and PII protected, every change checked before it ships.

3 · Compliance by design
HIPAA, NABH and audit trails designed in from the start, never bolted on later.

4 · Performance & scale
Fast today, and built to stay fast as usage grows — without a rewrite.

5 · Standards that last
Proven standards over clever shortcuts, so the system is still easy to change years later.

EXPERIENCE

Senior Software Engineer
Nov 2025 – Present

Infinite Computer Solutions · Healthcare software

- Designs and builds healthcare platform services with privacy and auditability built in.
- Protects PHI and PII through encryption, least-privilege access and access logging.
- Uses AI-assisted engineering for development, review and testing — with human verification.

Senior Software Engineer
Aug 2022 – Nov 2025

BeyondID · Identity & access management for enterprise clients, US & Europe

- Delivered federation, single sign-on and platform upgrades for enterprise clients in sports media and banking, across OIDC, SAML and OAuth 2.0.
- Built automated provisioning and a bulk, auditable migration from a self-hosted identity provider to Okta — no user re-onboarding.
- Modernised legacy identity connectors for performance and maintainability; brought static analysis into the pipeline.
- Built an internal pre-sales estimation tool that improved estimate accuracy; mentored engineers and earned three Okta certifications.

Full Stack Developer
Aug 2019 – Feb 2022

Digital Nepal · Education software, multi-tenant SaaS

- Designed and built HR & payroll, CRM, content and online-examination modules on one multi-tenant platform.
- Led the CRM re-architecture for usability, maintainability and scale — about 25% faster on hot paths.
- Modularised a monolith and containerised it on AWS, cutting manual deployment time.
- Contributed to the multi-tenancy redesign that made onboarding a new institution routine.

INDEPENDENT PROJECT

A multi-tenant healthcare & enterprise SaaS platform, designed and built independently.
Ongoing

Independent build · personal project

My own platform, built in my own time to prove these practices end to end: a modular monolith being split into microservices, event-driven integration, tenant isolation enforced in the database, GitOps delivery on AWS, a shift-left security pipeline, and compliance features — PHI access logging, HIPAA-aligned safeguards and NABH-aligned clinical workflows.

PROBLEMS SOLVED

- **Tenant isolation that fails closed** — Isolation holds even when application code is wrong
- **Identity federation and zero-downtime migration** — Single sign-on across the estate; migration with no re-onboarding
- **Reliable event-driven integration** — Redeliveries and replays are safe by construction

CAPABILITIES

Architecture & system design	Microservices & distributed systems · Event-driven design · Multi-tenant SaaS · Domain & API design
Scalability & performance	Horizontal scaling & caching · Query and data-model tuning · Load and latency budgets · Resilience under failure
Development	Backend platforms & APIs · Data modelling & migrations · Clean, reviewable code · AI-assisted engineering
Testing & quality	Test strategy, unit to end-to-end · Integration & contract tests · Automated quality gates · Accessibility (WCAG 2.2 AA)
Cloud & CI/CD	AWS · Continuous integration & delivery · GitOps & containers · Infrastructure as code & observability
Security & privacy	Secure SDLC & threat modelling · PHI & PII protection · Encryption & key management · Supply-chain & secrets security
Identity & access	Okta certified (three credentials) · Single sign-on & federation · OAuth 2.0 · OIDC · SAML · User provisioning & lifecycle
Compliance	HIPAA-aligned safeguards · NABH accreditation workflows · Audit trails & tamper evidence · Data-privacy & retention rules
Standards I design against	HIPAA · NABH · OWASP · WCAG 2.2 · OAuth 2.0 · OIDC · SOC 2 · ISO 27001 · Data privacy

TOOLKIT

Languages & frameworks	Java, Spring Boot, Spring Security, Hibernate/JPA, SQL, TypeScript, React
Data & messaging	PostgreSQL, MySQL, Redis, Kafka, RabbitMQ, Flyway
Cloud & delivery	AWS, Docker, Kubernetes, Helm, Terraform, GitHub Actions, GitOps (Argo CD)
Identity & security	Okta, Auth0, Keycloak, OAuth 2.0, OIDC, SAML, SCIM, OWASP, SAST/SCA, SBOM
Testing	Playwright, JUnit, Mockito, Testcontainers, ArchUnit
AI-assisted delivery	Claude Code, MCP servers, multi-agent workflows with human verification

EDUCATION

- Master of Computer Science — in progress
- BSc Computer Science — 2015 – 2019

CERTIFICATIONS

- Okta Certified Developer — Customer Identity Cloud · 2024
- Okta Certified Consultant — 2023
- Okta Certified Developer — Workforce Identity Cloud · 2023
- Web Security & Access Management — JWT · OAuth 2.0 · OIDC · 2022

Client names are described by industry.
